

# KARESS.COM AUTO FULLFILLMENT PROJECT SCOPE

---

## Project Overview

Karessme.com is an adult novelty and toys e-commerce store built with Drupal 9. The e-commerce feature of the application is built with Drupal Commerce. The model of the store is drop shipping. Products are distributed and shipped from Honey's Place (<https://honeysplace.com>) adult novelty wholesale distributor. The Karessme.com application imports products from the vendor provided xml/json files, using the Drupal Feeds module (<https://www.drupal.org/project/feeds>), and is configured for purchase using Drupal Commerce product, checkout, and shipping methods.

The scope of this project is to automate the order fulfillment process after products are confirmed for purchase from customers via the API provided by Honey's Place (see [hp\\_api\\_doc.pdf](#) and [hp\\_api\\_doc.txt](#)).

The order fulfillment feature can be triggered via cron, on-demand or any other reliable recommendations from the potential contractor.

I am seeking a reusable solution. A solution that can be utilized in a Drupal Commerce application regardless of the vendor.

## Development Platform

Currently there are 4 products on the platform. The products are for testing purposes only. Once the project is complete, more products will be imported to the store then deployed to production.

The payment gateways currently active are Square and PayPal. Please use the test credit card numbers provided below for product testing.
